

INVERTER COMPATIBILITY LIST - GITER

This document describes the range of inverters which are strictly compatible with the Giter range of batteries

Some important notes to remember when pairing the Giter and Kodak inverters.

Having a battery bank that is too small for the inverter rating can lead to several issues.

- Unexpected system shut-downs
- Damage to sensitive loads
- Damage to system equipment
- System not working at all
- System not meeting expectations
- Shortened lifespan of equipment
- System Expansion is limited to 6 units in parallel
- **Warranty void (batteries used outside limits)**
- **Warranty void (batteries operated with units that are not on this list)**

Giter 2.56 – 24V
Inverter/Charger Model
Kodak OG 1.24
Kodak OG 3.24
Kodak OG 3.6
Kodak OG Plus 3.24

Giter 2.56 – 48V
Inverter/Charger Model
Kodak OG 5.48
Kodak OG-7.2
Kodak OG Plus 5.48

Note care should be taken with deployments integrating the Giter battery to ensure that the Continuous Discharge Rating is matched against the inverters rated capacity.
